

# CAB BOOKING

Aim

To create a web API "CAB BOOKING" using ZOHO

Procedure:

- > Sign up for ZOHO creator, if you don't have account you can use free plan.
- > After logging in, create a new application and give it a name "CAB Booking".
- > The structure of API is defined by the fields for application.
- > Fields of cab booking like
  - Pickup location
  - drop location
  - date & time of pickup
  - date & time of pickup
  - Number of Passengers.
- > Create forms to collect data from users who want to book a cab. By using drop and drag interface it is easy to create forms.
- > For making changes in the fields of API, select open builder and edit.
- > Adding, Deleting like options are available to edit field names.
- > click "DONE" after editing. now the web API cab booking is created.

## Output

### Basic fields

name

email

Name

Employee ID

Email ID

address

Phone
