Ex: 04

1) Modify the RAM and storage for the created virtual Machine.

Aim:

Procedure:

→ Make sure your virtual Machine is shut down and not running.

→ Open VM virtual Box and select the virtual machine you want to modify from the list of virtual machines.

→ click on the "settings" button in the top menu.

→ In the "settings" window, click on the "System's" tab on the left-hand side.

→ Under the amount of RAM to 10GB that is allocated to your virtual Machine by sliding the 'Base Memory' slider (or) entering the value 256B manually in the text box.

→ To modify the virtual hard disk, Click on the "Storage" tab on the left-hand side of the "settings" window.

→ Select the virtual hard disk you want to modify from the list of storage devices & and Click on the "Attributes" button.

→ In the "Attributes" window you can modify the size of the virtual hard disk by sliding the "size" slider (or) entering the value manually the text box.

→ After making your desired changes click "OK" to save your modifications.

That's 1 your changes to the RAM & Storage for your virtual machine should now be reflected the next time you start the virtual Machine.

output :-

☐ Padma Priya :
